- 1 kW = 1000 watts; 1 volt ampere = 1 watt; watts divided by volts = amps
- Use nameplate ratings on fixtures/appliances for load values.
- Determine values for freestanding range based on name plate rating and table below. (A reduction is allowed)
- If de-amping an MH-unit, a permit from HCD is required. Use HCD 415 Application, include \$196.00 in fees, complete and attach this form and indicate on the HCD 415 what electrical loads will be reduced or eliminated to reduce the loads to the desired level.
- A 15 amp evaporative cooler circuit must be included in the calculations if the home is de-amped to 50 amps.
- \* Omit smaller of air conditioning and heating ampere load.
- \*\* If home is wired for electric dryer but the dryer is not installed, use 21 amp value.
- \*\*\* Derive amps for free-standing range (as distinguished from separate oven and cooking units) by dividing values below by 240 volts.

**FREESTANDING RANGE REDUCTION TABLE**

Nameplate Rating (in watts)	Use (in watts)
10,000 or less	80 Percent of rating
10,001 to 12,500	8,000
12,501 to 13,500	8,400
13,501 to 14,500	8,800

**Example:**

A 24 x 60 MH-unit is equipped with the following equipment. Calculate all loads and "balance" the 120 v load.

Two small appliance circuits	One laundry circuit
Two bath fans: 1 rated 1.2 amp/120 v, 1 rated 1.7 amp/120 v	Range hood: 1.9 amp/120 v
Freestanding electric range: 13.2 kW/240 v	Disposal: 7.3 amp/120 v
Electric Furnace: 10.5 kW/240 v (motor load 4.0 amp included)	Dishwasher: 8.7 amp/120 v
Air conditioner: 24 amp/240 v (motor load 8.0 amp included)	Dryer Circuit: 21 amp/240 v
Electric water heater: Upper element 4500 watts/240 v; Lower element 4500 watts/240 v	

- A. Lighting:** Length of home times width of home (outside dimensions) = square foot, times 3 watts per square foot  
 Length 60 X Width 24 x 3 watts.....= 4320 watts
- B. Small Appliances:** Enter number of 20-amp small appliance (exclude laundry) circuits, times 1,500 Watts.  
 Number of circuits 2 x 1,500 watts.....= 3000 watts
- C. Laundry:** Include 1,500 watt minimum if installed.....= 1500 watts
- D. Total (the sum of lines A, B and C):**.....= 8820 watts
- E. First 3,000 watts at 100%:**.....= 3000 watts
- F. 8820 minus 3,000 = 5820 watts multiplied by 35% (.35):**.....= 2037 watts

23. <b>TOTAL LOAD IN AMPS (combine Parts 1 &amp; 2)</b>	154.1	153.7

- All loads for this example must be converted to amps.
- Voltages for equipment in this example are 120 v or 240 v.
- The electric range load is 13.2 kW (13200 watts) using the freestanding electric range reduction table, a 13200 watt load reduces to 8400 watts. 8400 watts divided by 240 volts = 35 amps.
- If the home is equipped with air conditioning, omit the smaller of either the heating (gas or electric) load or the a/c load. In this example, the heating load is 43.8 amps and the a/c load is 24 amps, hence the a/c load is omitted from the calculations.
